Enter to Learn, Leave to Succeed	**Fortune Institute of International Business, New Delhi** ***Post Graduate Diploma in Management*** **Course Outline**

Course Title: AI & the Future of Work (AFW)		
Term: II	**Academic Year:** 2026-27	**Type:** Core
Area: Operations	**Credits / Hours:** 3.0 / 30 Hrs.	**Lead Faculty:** Dr. Shardul Shankar | shardul.shankar@fiib.edu.in
Pre-requisites: Foundations of AI in Business		
*** Note:** You are encouraged to connect with the instructor during the defined office hours for guidance, clarification, or deeper discussion of course topics. These sessions are an open space for academic support and professional dialogue.		

1. COURSE INTRODUCTION

AI and Future of Work (AFW) examines how artificial intelligence is changing jobs, tasks, workflows, decision rights, and the nature of managerial work. The course moves beyond using AI as a productivity tool to redesigning how work is actually performed – what people should do, what AI systems and agents should do, how the two should interact, and where human judgement and accountability must remain. Through live cases, practitioner problems, tool-based labs, and a term-long project, students diagnose real work processes, build and test AI-enabled workflows and business solutions, and develop visible professional evidence through a live e-portfolio. The course culminates in a working team solution that is tested, improved, governed, and defended from both business and implementation perspectives.

2. MACRO QUESTION

How can managers redesign work, workflows, and professional value so humans and AI systems create better business outcomes together?

3. PREREQUISITES

Foundations of AI in Business

FX CAPABILITY, EMPLOYABILITY & PATHWAY LAYER

STANDARD NOTE ON THE CAPABILITY ARCS

FIIB ARC is a capability architecture, not a sequence. **Foundation, Connection, Analysis & Intelligence,** and **Judgement & Impact** coexist and reinforce one another throughout the learning journey. Faculty should therefore explain how the course contributes to all four arcs rather than selecting only some of them.

Career Pathway & Track Alignment

Career Track(s) Supported: Not Applicable – Core Course.
Explanation of Alignment: AFW is studied by all students irrespective of career track.

Employability Signal

- **Employability-level**

Foundation Core	*Foundation Skill*	*Professional Core*	*Professional Skill*	*Premier Skill*
		✔		

CONTRIBUTION TO THE FOUR CAPABILITY ARCS	**Foundation:** The language of AI-shaped work: jobs vs tasks, workflows, agents, augmentation vs automation.
	Connection: How people, process, data and tools link across functions when work is redesigned.
	Analysis & Intelligence: Mapping today's work, gathering evidence, and building and testing with real tools.
	Judgement & Impact: Deciding what AI should and should not do, governing it, and defending the choice.
AI IN THE COURSE	**Nature of AI use in the course:** ☒ Conceptual exposure ☒ Analytical support ☒ Content generation ☒ Critique ☒ Simulation ☒ Decision support ☒ Creative exploration
	Main sessions where AI is visible: Sessions 1–20, with hands-on building and testing particularly visible across Sessions 2–4, 7–8, 10–17 and 19–20.
	What students do with AI: ☒ Analyse ☒ Compare ☒ Generate ☒ Critique ☒ Interpret ☒ Build ☒ Simulate
	AI boundary in the course: AI may support analysis, comparison, generation, critique, building, testing, and iteration. It does not substitute for selecting and framing the problem, judging the appropriateness of a solution, authentic practitioner evidence, live panel/viva responses, or claims about individual contribution.
RESPONSIBILITY IN THE COURSE	**Overall approach:** Responsibility is embedded in how students design and implement human-AI work systems. Students consider privacy, data minimisation, permissions, human decision rights, escalation, accountability, safe testing, stakeholder impact, and implementation controls rather than treating responsible AI as a separate topic.
	Main sessions / modules where this is most visible: Sessions 4, 13, 16, 17, 19–20, with increasing emphasis as students move from decision rights and architecture into testing, governance, stakeholder validation, and final defence.
	How students engage with it: ☒ Analyse trade-offs ☒ Discuss implications ☒ Critique decisions ☒ Evaluate impact ☒ Reflect on stakeholders

4. TOOLS, PLATFORMS & TECHNOLOGICAL APPLICATIONS

SESSION	TOPIC	TOOL / PLATFORM	AI VISIBLE?
2–4	Agentic workflows, automation, branching and human control	Google Workspace Studio; Gemini / Gems	Yes
7–9, 18	Version control, live applications and professional e-portfolios	GitHub; Streamlit	Yes
10–15	Evidence synthesis, persistent data and connected AI-enabled applications	NotebookLM; Supabase; MCP-enabled tool connectivity	Yes
14–20	Solution building, testing, iteration and deployment	Approved GenAI tools and agents; GitHub; Streamlit; Supabase	Yes

5. COURSE OBJECTIVES

1. To develop an understanding of how AI reshapes jobs, tasks, workflows, decision rights, and managerial work.
2. To develop hands-on capability with contemporary AI-enabled work systems, including agents, MCP-based tool connectivity, connected workflows, business applications, version control, persistent data, and live professional portfolios.
3. To develop the ability to diagnose real organisational problems and design evidence-based human-AI solution architectures appropriate to the context.
4. To strengthen students' ability to test, govern, improve, communicate, and defend AI-enabled solutions with attention to stakeholders, privacy, control, and implementation.

6. COURSE LEARNING OUTCOMES

- LO1. Analyze how AI changes jobs, tasks, workflows, decision rights, and managerial work, including opportunities for augmentation and automation.
- LO2. Build and deploy AI-enabled workflows and business applications using appropriate tools for interface, automation, versioning, persistence, agentic workflows, and tool connectivity.
- LO3. Design evidence-based human-AI solution architectures for real organizational problems, selecting among agentic, app-based, data-backed, hybrid, or deterministic approaches.
- LO4. Evaluate, improve, govern, and defend AI-enabled solutions using structured testing, failure analysis, stakeholder validation, privacy and control, and implementation planning.

7. MAPPING TO PROGRAMME LEARNING OUTCOMES

Map each learning outcome to the relevant programme learning outcomes and indicate the strength of alignment using the following scale: ***1 = Low, 2 = Medium, 3 = High.*** *Official PLO descriptions should be inserted by the Programme Office to ensure consistency and avoid mapping errors.*

PLO GUIDANCE

PLO 1: Effective Communicator [Communicate effectively in the business context, using a range of media that are widely used in business environments]

- **PLO 1A:** Written Communication [Produce professional quality business documents]
- **PLO 1B:** Oral Communication [Deliver a professional quality presentation accompanied by appropriate technology]

PLO 2: Competent Team Worker [Demonstrate the ability to work cohesively and effectively in teams]

PLO 3: Societal Responsibility [Cultivating a global perspective and identity to foster a Social Responsibility Mindset]

PLO 4: Intelligent Problem Solver [Critical thinker and problem solver who is able to make informed decisions using data insights and applying financial knowledge]

PLO 5: Reflective and Resilient Life Long Learner [Ability to adapt to evolving business landscapes, learn from experiences, bounce back from setbacks, and continuously enhance skills for sustainable success]

LOs / Sessions / PLOs	Relevant Sessions	PLO-1A	PLO-1B	PLO-2	PLO-3	PLO-4	PLO-5
LO1: Analyze how AI changes jobs, tasks, workflows, decision rights, and managerial work, including opportunities for augmentation and automation.	1, 4, 5, 6, 9, 10, 13, 15, 18, 19, 20	–	–	–	2	3	2

LOs / Sessions / PLOs	Relevant Sessions	PLO-1A	PLO-1B	PLO-2	PLO-3	PLO-4	PLO-5
LO2: Build and deploy AI-enabled workflows and business applications using appropriate tools for interface, automation, versioning, persistence, agentic workflows, and tool connectivity.	2, 3, 7, 8, 11, 12, 14, 19, 20	–	–	2	–	3	2
LO3: Design evidence-based human-AI solution architectures for real organizational problems, selecting among agentic, app-based, data-backed, hybrid, or deterministic approaches.	5, 10, 11, 13, 14, 15, 17, 19, 20	–	–	3	2	3	2
LO4: Evaluate, improve, govern, and defend AI-enabled solutions using structured testing, failure analysis, stakeholder validation, privacy and control, and implementation planning.	1, 3, 4, 6, 7, 9, 13, 15, 16, 17, 18, 19, 20	2	3	2	3	3	3

8. COURSE MODULES

Sr. No.	MODULE TITLE	TOPICS COVERED	SESSIONS
1	Understand the Work	Future of work; jobs vs tasks; augmentation vs automation; agentic workflows; branching and escalation; decision rights; privacy and human control; identification and scoping of a real workplace problem	1–5
2	Show Your Skills	Future-ready professional capability; professional positioning; GitHub and version control; Streamlit; live digital portfolios; evidence-backed claims; recruiter-facing credibility and usability	6–9
3	Build the Solution	Current-state workflow diagnosis; NotebookLM-supported evidence synthesis; persistent data; Supabase; connected applications; human-AI work redesign; agents and MCP-enabled tool connectivity; solution architecture; MVP development and initial testing	10–15
4	Prove It Works	Structured evaluation; failure analysis; iteration; red-teaming; stakeholder and practitioner validation; implementation planning; professional capability demonstration; final working solution and defence	16–20

9. COURSE CONTENT AND SCHEDULE

Session	Module	Micro Question	Learning Outcomes	Concepts	Frameworks	Live Case	Activity	Pedagogy & Assessments	LinkedIn Learning	Artefact
1	Understand the Work	How is AI changing the way work is divided between people and machines?	LO1, LO4	Future of work; jobs vs tasks; augmentation vs automation; human judgement; task redistribution	Jobs-to-tasks lens; augmentation-automation continuum	Basis (Sep 2026)	Business case discussion; faculty agent demonstration; live student testing; capstone briefing	Discussion-Based Learning; Live Cases; Tool Application Labs; AS1 Discussion Questions		
2	Understand the Work	How does an agent turn a trigger into useful workplace action?	LO2	Workspace Studio; triggers; variables; actions; records; debugging	Trigger → AI → Variable → Action → Record	Proaction	Guided hands-on agentic workflow build	Tool Application Labs; AI as Co-pilot	Hands-On AI: Build Automated Workflows in Google Workspace Studio	
3	Understand the Work	When should an AI workflow make a decision, branch, or escalate to a person?	LO2, LO4	Branching; routing; escalation; incomplete and high-risk cases	Extract → Decide → Check If; escalation path	Bell + ServiceNow AI Agents (2026)	Hands-on workflow upgrade and scenario testing	Tool Application Labs; Decision Simulators; AI as Co-pilot		
4	Understand the Work	When AI participates in work, who should decide, approve, act, and remain accountable?	LO1, LO4	Decision rights; privacy; data minimisation; permissions; autonomy; stop conditions; logging	Human-AI decision-rights design; autonomy and escalation rules	Gilbert + Tobin D.C. court AI-citation case	Case discussion; governance redesign; WIP 1 physical evidence-folder /sign-off gate	Live Cases; Discussion-Based Learning; Critique and Reflection		

Session	Module	Micro Question	Learning Outcomes	Concepts	Frameworks	Live Case	Activity	Pedagogy & Assessments	LinkedIn Learning	Artefact
5	Understand the Work	What real work problem is worth solving, and what part of the work may need redesign?	LO1, LO3	Practitioner outreach; current process; pain point; evidence; unknowns; workplace value; AI suitability	Project Charter; problem-scope-evidence framing	Live practitioner problem – authenticated through official communication evidence (no public URL)	WIP 1 presentation and defence	Project Studios; Industry / Market Immersions and Practitioner Interaction; Critique and Reflection; AS2 WIP 1 – Problem Discovery		
6	Show Your Skills	What capabilities will make a graduate valuable in an AI-shaped workplace, and how should they show them?	LO1, LO4	Professional identity; role positioning; capability evidence; portfolio architecture; privacy; recruiter journey	Professional capability / evidence framing	PwC 2026 AI Jobs Barometer	Individual professional positioning and portfolio strategy workshop	Discussion-Based Learning; Project Studios; Critique and Reflection		
7	Show Your Skills	How can a professional use version control to show credible, evolving work?	LO2, LO4	GitHub repositories; README; commits; version history; hygiene; secrets	Version-control cycle	1Password + Codex	Hands-on GitHub workshop	Tool Application Labs; Project Studios	GitHub Essential Training: 1 The Basics	

Session	Module	Micro Question	Learning Outcomes	Concepts	Frameworks	Live Case	Activity	Pedagogy & Assessments	LinkedIn Learning	Artefact
8	Show Your Skills	How can a student turn professional evidence into a live, shareable digital experience?	LO2	Streamlit; interface; pages; navigation; deployment; recruiter-facing design	Interface-to-live-product flow	Proaction	Hands-on Streamlit build and deployment	Tool Application Labs; Project Studios; AI as Co-pilot	Build with AI: LLM-Powered Applications with Streamlit	
9	Show Your Skills	What makes an e-portfolio credible and useful to a recruiter rather than just attractive?	LO1, LO4	Evidence-backed claims; project storytelling; usability; information hierarchy; mobile readability; privacy	Recruiter-readiness audit	Proaction	Portfolio build lab; 90-second peer recruiter test; WIP 2 physical evidence-folder /sign-off gate	Project Studios; Critique and Reflection		
10	Build the Solution	How does the work happen today, where does it fail, and what evidence justifies changing it?	LO1, LO3	As-is workflow; tasks; people; handoffs; bottlenecks; decision owner; constraints; success criteria; NotebookLM-supported evidence synthesis	Current-state workflow map; evidence scan	Live practitioner problem (no public URL)	WIP 2 presentation and defence; NotebookLM-supported evidence consolidation	Project Studios; Industry / Market Immersions and Practitioner Interaction; AI as Co-pilot; Critique and Reflection; AS3 WIP 2 – Business Problem & Evidence		

Session	Module	Micro Question	Learning Outcomes	Concepts	Frameworks	Live Case	Activity	Pedagogy & Assessments	LinkedIn Learning	Artefact
11	Build the Solution	When does a business solution need memory, records, and persistent state?	LO2, LO3	Persistence; tables; records; fields; IDs; create/read/update; case status	Record schema; CRUD cycle	Clay	Hands-on database workshop	Tool Application Labs; AI as Co-pilot	Supabase Essential Training	
12	Build the Solution	How do interface, code, and persistent data work together in a usable business application?	LO2	Streamlit + GitHub + Supabase; submit/store/retrieve/update; dashboards; credential hygiene	Interface → Persistence → Retrieval / Update	Proaction	Guided integration build	Tool Application Labs; Project Studios; AI as Co-pilot		
13	Build the Solution	How should humans and AI divide work in the future-state process, and what architecture best supports that design?	LO1, LO3, LO4	Human-AI redesign; Gem vs agent vs app vs database vs hybrid vs deterministic; MCP and tool connectivity; human control	User → Trigger → Evidence → Decision → Action → Human Control; architecture-choice logic	BBVA + OpenAI	Team solution architecture studio and faculty challenge	Project Studios; AI as Co-pilot; Critique and Reflection		
14	Build the Solution	Can the chosen architecture solve one realistic client case end-to-end?	LO2, LO3	MVP; end-to-end path; actual stack; realistic cases	Normal / difficult / break cases; initial test log	Team's live practitioner problem (no public URL)	Supervised team build lab; initial testing; WIP 3 physical evidence-folder /sign-off gate	Project Studios; Tool Application Labs; AI as Co-pilot		

Session	Module	Micro Question	Learning Outcomes	Concepts	Frameworks	Live Case	Activity	Pedagogy & Assessments	LinkedIn Learning	Artefact
15	Build the Solution	Is the proposed future workflow and methodology defensible before the team invests further?	LO1, LO3, LO4	Problem-method fit; architecture rationale; prototype evidence; failures; NotebookLM-supported evidence/methodology consolidation	Future-state workflow; revise/re-architect gate	Asana + Codex	WIP 3 presentation and defence	Project Studios; AI as Co-pilot; Critique and Reflection; AS4 WIP 3 – Future Workflow, Methodology & Prototype		
16	Prove It Works	How can a team prove that a business solution works, identify where it fails, and improve it?	LO4	Evaluation criteria; expected outcome; pass/fail; failure taxonomy; intervention; retesting	Expected → Run → Failure → Intervention → Retest; V1 → V2	Anthropic + Accenture Embedded Evaluation	Structured evaluation; failure analysis; improvement sprint	Tool Application Labs; Project Studios; Critique and Reflection		
17	Prove It Works	Will the solution survive external scrutiny, stakeholder reality, and implementation constraints?	LO3, LO4	Red-team testing; ambiguous inputs; adoption barriers; pilot scope; oversight; risk; success metrics	Red-team protocol; pilot / implementation planning	Enterprise Frontier Safeguards	Cross-team red-team; practitioner validation; implementation planning	Decision Simulators; Critique and Reflection; Industry / Market Immersions and Practitioner Interaction; AS5 LinkedIn Learning final submission		

Session	Module	Micro Question	Learning Outcomes	Concepts	Frameworks	Live Case	Activity	Pedagogy & Assessments	LinkedIn Learning	Artefact
18	Prove It Works	Can the student demonstrate future-ready capability in a way a recruiter can understand and trust?	LO1, LO4	Professional readiness; role fit; evidence; project narrative; individual contribution; credibility; privacy	Recruiter-readiness audit	OpenAI worker-task research	Live e-portfolio assessment with L&D reviewers; final project physical evidence-folder /sign-off gate	Project Studios; Critique and Reflection; AS6 Individual Live E-Portfolio		Individual Live Professional E-Portfolio
19	Prove It Works	Can the team defend how its solution changes work, why the redesign is better, and how it should be implemented?	LO1, LO2, LO3, LO4	Full problem-to-implementation chain	Problem → Evidence → Architecture → Redesigned Workflow → Solution → Tests → Failure → Improvement → Stakeholder Response → Implementation	Team's live industry problem (no public URL)	Final Business Solution Panel – Day 1; live demonstration/ challenge; panel questions; individual viva	Industry / Market Immersions and Practitioner Interaction; Critique and Reflection; Project Studios; AS7 Final Business Solution & Defence – Day 1		

Session	Module	Micro Question	Learning Outcomes	Concepts	Frameworks	Live Case	Activity	Pedagogy & Assessments	LinkedIn Learning	Artefact
20	Prove It Works	Can the team defend how its solution changes work, why the redesign is better, and how it should be implemented?	LO1, LO2, LO3, LO4	Full problem-to-implementation chain	Problem → Evidence → Architecture → Redesigned Workflow → Solution → Tests → Failure → Improvement → Stakeholder Response → Implementation	Team's live industry problem (no public URL)	Final Business Solution Panel – Day 2; live demonstration/ challenge; panel questions; individual viva	Industry / Market Immersions and Practitioner Interaction; Critique and Reflection; Project Studios; AS7 Final Business Solution & Defence – Day 2		Team Working AI-Enabled Business Solution

10. PEDAGOGY GUIDE

Use these labels in the session-wise pedagogy column. They are FIIBX-aligned pedagogical styles that show how capability is being built through different forms of engagement with concepts, cases, tools, markets, outputs, and professional realities.

Discussion-Based Learning

Learning through structured discussion, interpretation, questioning, and exchange around concepts, issues, or situations. This supports grounding, connection, and the sharpening of managerial thinking.

Live Cases

Learning through current or real business situations that require contextual understanding, diagnosis, and response. This helps students connect concepts to live managerial realities.

Decision Simulators

Learning through simulated decision environments where students must make choices under uncertainty, trade-offs, or changing conditions. This is especially useful for building judgement and consequence-awareness.

AI as Co-pilot

Learning in which AI is used as an active support for thinking, analysis, interpretation, generation, comparison, or critique. Here AI is part of the learning process, not just an add-on.

Tool Application Labs

Learning through hands-on use of tools, platforms, methods, frameworks, models, or analytics environments. This supports analysis, augmentation, and practical readiness.

Project Studios

Learning through building and refining a tangible output over time, such as a strategy, dashboard, report, campaign, prototype, or solution. This creates visible proof of capability.

Critique and Reflection

Learning through structured review, questioning, defence, feedback, and improvement of ideas, outputs, or decisions. This deepens judgement and improves quality of thinking.

Industry / Market Immersions and Practitioner Interaction

Learning through direct engagement with market realities, sectoral contexts, and practitioners who bring live business experience and applied insight into the learning process. This strengthens connection to professional reality and employability expectations.

11. ACTIONWORKS COVERAGE ACROSS THE COURSE

Experience	**Students encounter a business problem, decision, case, situation, or managerial reality.** **Pedagogical approaches that commonly support Experience:** Live Cases, Discussion, Critique & Reflection, Industry / Market Immersions and Practitioner Interaction. **Sessions where this is visible:** 1, 4, 5, 6, 10, 13, 17, 18, 19, 20
Explore	**Students investigate, diagnose, frame, interpret, or make sense of a problem or context.** **Pedagogical approaches that commonly support Explore:** Discussion, Critique & Reflection, Live Cases, Tool Application Labs, AI as Co-pilot. **Sessions where this is visible:** 1, 3, 4, 5, 6, 9, 10, 13, 15, 17
Execute	**Students apply, solve, build, recommend, decide, or otherwise respond through purposeful action.** **Pedagogical approaches that commonly support Execute:** Tool Application Labs, Project / Live Project Studio, Decision Simulators, AI as Co-pilot. **Sessions where this is visible:** 2, 3, 7, 8, 11, 12, 13, 14, 16
Evaluate	**Students review, compare, critique, defend, reflect, or assess the quality and implications of what was done.** **Pedagogical approaches that commonly support Evaluate:** Discussion, Critique & Reflection, Decision Simulators, Industry / Market Immersions and Practitioner Interaction. **Sessions where this is visible:** 3, 4, 9, 14, 15, 16, 17, 18, 19, 20
Evolve	**Students revise, improve, adapt, iterate, or respond to changed conditions, constraints, or feedback.** **Pedagogical approaches that commonly support Evolve:** Discussion, Critique & Reflection, Project / Live Project Studio, AI as Co-pilot, Decision Simulators. **Sessions where this is visible:** 9, 14, 15, 16, 17, 18
Comment on overall balance	The course moves from Experience and Explore in the early sessions to sustained Execute through tool labs and solution building. Evaluate and Evolve become increasingly visible from prototype testing onward through peer review, failure analysis, red-teaming, practitioner validation, iteration, and final defence. The five movements recur rather than operate as isolated stages.

12. ASSESSMENT COMPONENTS

***AFW does not use the 60 (internal) + 40 (End Term Examination) split**: there is no End Term Examination, and the course is assessed entirely through seven components, AS1–AS7, totalling **100 marks**.*

No.	Assessment Component	Marks	Mode	Session(s)	LOs	PLOs	Artifact Produced	AI Assessment Leve	Evidence Works Level	Signature Format
AS1	Discussion Questions	5	Individual	1	LO1, LO4	PLO3, PLO4, PLO5	Individual analytical responses	No AI	Literacy	SOLVE
AS2	WIP 1 – Problem Discovery	10	Group	5	LO1, LO3	PLO2, PLO3, PLO4, PLO5	Project Charter + evidence trail	AI Collaboration	Literacy	SOLVE
AS3	WIP 2 – Business Problem & Evidence	10	Group	10	LO1, LO3	PLO2, PLO3, PLO4, PLO5	Current-state workflow + evidence scan	AI Collaboration	Application	SOLVE
AS4	WIP 3 – Future Workflow, Methodology & Prototype	10	Group	15	LO1, LO3, LO4	PLO1A, PLO1B, PLO2, PLO3, PLO4, PLO5	Future-state workflow + working prototype + initial test log	AI Collaboration	Build	FORGE
AS5	LinkedIn Learning Certificates	10	Individual	17	LO2	PLO4, PLO5	Four verified LinkedIn Learning certificates	No AI	Literacy	XLAB
AS6	Individual Live E-Portfolio	15	Individual	18	LO1, LO4	PLO1A, PLO4, PLO5	Individual Live Professional E-Portfolio	AI Collaboration	Build	FORGE
AS7	Final Business Solution & Defence	40	Group + individual viva	19–20	LO1, LO2, LO3, LO4	PLO1A, PLO1B, PLO2, PLO3, PLO4, PLO5	Team Working AI-Enabled Business Solution	Working Solution (24): Full AI Presentation & Defence (16): No AI	Working Solution (24): Build Presentation & Defence (16): Judgement	Working Solution (24): FORGE Presentation & Defence (16): BOARDROOM
Total Marks		100								

13. ASSESSMENT COMPONENTS

Assessment	AS1 – Discussion Questions
Purpose of the assessment	To assess students' independent understanding and application of foundational ideas related to AI, work redesign, workflows, human judgement, and responsible AI use.
Task for students	Answer short concept- and situation-based questions based on the ideas introduced in the course.
Expected output / submission	Individual responses to the assigned discussion questions.
Assessment type	☒ Individual ☐ Group
Assigned Session	1
Submission Session	1
Score Sharing	3
AI Assessment Level	☒ No AI ☐ AI Planning ☐ AI Collaboration ☐ Full AI ☐ AI Exploration
How AI may be used in this assessment	AI may not be used to generate, revise, or answer the assessment responses.
What students must do independently	Interpret the questions, apply relevant course concepts, and formulate their own responses.
Disclosure / documentation requirement	No AI use is permitted; no AI-use documentation is therefore required.
Capability evidence expected	Evidence that the student can independently understand and apply the foundational language and reasoning of AI-enabled work.
Evaluation criteria	Conceptual accuracy; relevance to the question; application of course ideas; clarity of reasoning.
Late submission / extension policy	Submissions received after the stated deadline will not be accepted or evaluated. No delayed submission is permitted.
Academic integrity / plagiarism rule	All submissions are expected to adhere to the institution's standards of academic integrity. Any plagiarism, unattributed use of sources, or misuse of AI, where AI use is restricted or not disclosed, will be treated in accordance with institutional policy.

Assessment	AS2 – WIP 1 – Problem Discovery
Purpose of the assessment	To assess whether the team has identified a real, specific workplace problem worth investigating and has established credible access to the organisational context.
Task for students	Investigate a real work problem through practitioner engagement and explain the problem, who it affects, why it matters, and the initial scope for work redesign.
Expected output / submission	Project Charter covering the problem, organisation, practitioner/contact, scope, team roles, and intended outcome; supporting evidence folder; presentation and defence. The faculty-signed physical evidence folder must be ready before Session 5. Teams without the required folder will not be permitted to appear for the WIP 1 presentation.

Assessment type	☐ Individual ☒ Group
Assigned Session	1
Submission Session	5
Score Sharing	7
AI Assessment Level	☐ No AI ☐ AI Planning ☒ AI Collaboration ☐ Full AI ☐ AI Exploration
How AI may be used in this assessment	AI may support structuring, comparison, drafting, questioning, and refinement of the team's problem framing.
What students must do independently	Conduct practitioner outreach, establish the authenticity of the problem, select and scope the problem, verify the evidence, and defend the problem framing.
Disclosure / documentation requirement	The physical evidence folder must contain the working trail leading to the submission and verifiable practitioner engagement through official email IDs or other official contact points. Relevant documents must be faculty-signed. AI-generated practitioner evidence is not permitted. Evidence-folder rules (AS2, AS3, AS4, AS7): the physical evidence folder is for the team industry / practitioner project, not the e-portfolio, and is cumulative across the course. One master team folder may be kept, but each student must maintain their own copy of the required evidence (photocopies / identical signed sets are acceptable). Practitioners do not sign the folder; practitioner engagement is proven through official communication trails, and more engagement evidence (outreach, replies, clarifications, feedback, validation, follow-up) is encouraged. Practitioner validation is supporting evidence, not a separately scored criterion.
Capability evidence expected	A credible and clearly scoped workplace problem grounded in authentic practitioner engagement and traceable evidence.
Evaluation criteria	Problem specificity and relevance; clarity of scope; quality and credibility of evidence; understanding of affected stakeholders and workplace value; quality of defence.
Late submission / extension policy	Submissions received after the stated deadline will not be accepted or evaluated. No delayed submission is permitted.
Academic integrity / plagiarism rule	All submissions are expected to adhere to the institution's standards of academic integrity. Any plagiarism, unattributed use of sources, or misuse of AI, where AI use is restricted or not disclosed, will be treated in accordance with institutional policy.

Assessment	AS3 – WIP 2 – Business Problem & Evidence
Purpose of the assessment	To assess the team's ability to investigate how the selected work problem currently operates, identify where it fails, and build an evidence-backed diagnosis of the business problem.
Task for students	Map the current work process, identify key tasks, actors, handoffs, decision points, bottlenecks, pain points and unknowns, and consolidate relevant practitioner and secondary evidence supporting the diagnosis.
Expected output / submission	Current-state workflow/process map; evidence scan; practitioner notes and communication evidence; identified pain points and

	unknowns; presentation and defence. The faculty-signed physical evidence folder must be complete before Session 10. Teams without the required folder will not be permitted to appear for the WIP 2 presentation.
Assessment type	☐ Individual ☒ Group
Assigned Session	5
Submission Session	10
Score Sharing	12
AI Assessment Level	☐ No AI ☐ AI Planning ☒ AI Collaboration ☐ Full AI ☐ AI Exploration
How AI may be used in this assessment	AI, including NotebookLM where appropriate, may support evidence organisation, synthesis, comparison, questioning, process interpretation, and refinement of the team's analysis.
What students must do independently	Gather and verify authentic evidence, engage with practitioners, understand the current process, determine which issues are material, make the final diagnosis, and defend the analysis.
Disclosure / documentation requirement	The physical evidence folder must preserve the working trail from WIP 1 onward, including current-process evidence, practitioner communications, notes, supporting sources and relevant analytical work. Required documents must be faculty-signed. Students must be able to explain how AI-supported outputs were checked and used. The evidence-folder rules stated under AS2 apply.
Capability evidence expected	A traceable, evidence-backed diagnosis showing how the current work process operates, where meaningful problems occur, and why those problems warrant redesign.
Evaluation criteria	Quality of current-state diagnosis; completeness and logic of the workflow map; credibility and relevance of evidence; identification of meaningful pain points and unknowns; linkage between evidence and conclusions; quality of defence.
Late submission / extension policy	Submissions received after the stated deadline will not be accepted or evaluated. No delayed submission is permitted.
Academic integrity / plagiarism rule	All submissions are expected to adhere to the institution's standards of academic integrity. Any plagiarism, unattributed use of sources, or misuse of AI, where AI use is restricted or not disclosed, will be treated in accordance with institutional policy.

Assessment	AS4 – WIP 3 – Future Workflow, Methodology & Prototype
Purpose of the assessment	To assess the team's ability to redesign the current work process, select an appropriate human-AI solution architecture, and demonstrate that the proposed approach is sufficiently viable to take forward.
Task for students	Design the future-state workflow, justify the proposed solution architecture, build a working prototype, test it on realistic cases, identify initial failures, and decide whether to refine or re-architect the solution.
Expected output / submission	Future-state workflow; solution architecture and methodology; working prototype; initial test log; documented known failures;

	presentation and defence. The faculty-signed physical evidence folder must be complete before Session 15. Teams without the required folder will not be permitted to appear for the WIP 3 presentation.
Assessment type	☐ Individual ☒ Group
Assigned Session	10
Submission Session	15
Score Sharing	17
AI Assessment Level	☐ No AI ☐ AI Planning ☒ AI Collaboration ☐ Full AI ☐ AI Exploration
How AI may be used in this assessment	AI may support architecture exploration, workflow design, coding, prototyping, evidence synthesis, testing, debugging, comparison, and refinement. NotebookLM may be used to consolidate evidence and methodology where appropriate.
What students must do independently	Make the final problem-method fit decision, select and justify the architecture, verify the prototype's behaviour, interpret failures, determine necessary changes, and defend the future-state design.
Disclosure / documentation requirement	The physical evidence folder must preserve the cumulative working trail from WIP 1 and WIP 2 through architecture design, prototype development, testing, failures, revisions and practitioner evidence. Required documents must be faculty-signed. Students must be able to explain material AI-supported decisions and outputs. The evidence-folder rules stated under AS2 apply.
Capability evidence expected	A defensible future-state work design supported by an appropriate human-AI architecture, a functioning prototype, and visible evidence of testing and iteration.
Evaluation criteria	Quality of future-state redesign; problem-method fit; appropriateness and justification of architecture; functionality and relevance of prototype; quality of testing and failure analysis; use of evidence; quality of defence.
Late submission / extension policy	Submissions received after the stated deadline will not be accepted or evaluated. No delayed submission is permitted.
Academic integrity / plagiarism rule	All submissions are expected to adhere to the institution's standards of academic integrity. Any plagiarism, unattributed use of sources, or misuse of AI, where AI use is restricted or not disclosed, will be treated in accordance with institutional policy.

Assessment	AS5 – LinkedIn Learning Certificates
Purpose of the assessment	To assess students' completion of structured skill-development courses aligned with the tools and platforms used in the course.
Task for students	Complete the prescribed LinkedIn Learning courses aligned with Sessions 2, 7, 8 and 11 and submit valid evidence of completion.
Expected output / submission	Four LinkedIn Learning certificates, each accompanied by a working clickable certificate link. Each valid certificate carries 2.5 marks. A certificate without a valid clickable link will receive 0 marks. All four certificate submissions are due by Session 17. Students who do not submit all four valid certificates by the deadline will not be eligible to

	appear for the Individual Live E-Portfolio assessment in Session 18 or the Final Business Solution & Defence in Sessions 19–20.
Assessment type	☒ Individual ☐ Group
Assigned Session	2, 7, 8, 11
Submission Session	17
Score Sharing	20
AI Assessment Level	☒ No AI ☐ AI Planning ☐ AI Collaboration ☐ Full AI ☐ AI Exploration
How AI may be used in this assessment	AI is not used for the assessed submission. Students must independently complete the prescribed LinkedIn Learning courses and submit authentic evidence of completion.
What students must do independently	Complete each prescribed course and ensure that the submitted certificate and corresponding certificate link are valid and accessible.
Disclosure / documentation requirement	Students must submit the certificate and corresponding working verification link for each prescribed course. Invalid, inaccessible, or unverifiable links will not be accepted as evidence of completion.
Capability evidence expected	Verifiable completion of structured learning in agentic workflows, GitHub, Streamlit, and persistent-data tools relevant to the course.
Evaluation criteria	2.5 marks per valid certificate with a working clickable certificate link; maximum 10 marks.
Late submission / extension policy	Submissions received after the stated deadline will not be accepted or evaluated. No delayed submission is permitted.
Academic integrity / plagiarism rule	All submissions are expected to adhere to the institution's standards of academic integrity. Any plagiarism, unattributed use of sources, or misuse of AI, where AI use is restricted or not disclosed, will be treated in accordance with institutional policy.

Assessment	AS6 – Individual Live E-Portfolio
Purpose of the assessment	To assess whether the student can present credible, recruiter-relevant evidence of capability and professional readiness in an AI-shaped workplace.
Task for students	Build and present a live professional e-portfolio that communicates the student's capabilities, selected work, project evidence, contribution, and professional positioning to an external audience.
Expected output / submission	A live, accessible online e-portfolio assessed in Session 18. The portfolio itself is the primary assessed output; students may also be asked to briefly explain selected projects, decisions, and their individual contribution during the live review.
Assessment type	☒ Individual ☐ Group
Assigned Session	6
Submission Session	18
Score Sharing	20
AI Assessment Level	☐ No AI ☐ AI Planning ☒ AI Collaboration ☐ Full AI ☐ AI Exploration
How AI may be used in this assessment	AI may support portfolio planning, content refinement, coding, interface development, critique, testing, and improvement.

What students must do independently	Select what evidence to present, make final claims about their own capability and contribution, verify all content, make professional and privacy decisions, and explain their work during the live assessment.
Disclosure / documentation requirement	Students must be able to identify material AI-supported elements of the portfolio and explain how these were reviewed, modified, and validated. No physical evidence folder is required for this individual assessment.
Capability evidence expected	A live professional portfolio that provides credible and usable evidence of the student's capabilities, projects, individual contribution, and readiness for professional opportunities.
Evaluation criteria	Quality and credibility of capability evidence; professional positioning; clarity of individual contribution; quality and usability of the live portfolio; project communication; privacy and responsible presentation of information; ability to explain and defend the work.
Late submission / extension policy	Submissions received after the stated deadline will not be accepted or evaluated. No delayed submission is permitted.
Academic integrity / plagiarism rule	All submissions are expected to adhere to the institution's standards of academic integrity. Any plagiarism, unattributed use of sources, or misuse of AI, where AI use is restricted or not disclosed, will be treated in accordance with institutional policy.

Assessment	AS7 – Final Business Solution & Defence
Purpose of the assessment	To assess whether the team can deliver a working AI-enabled business solution for a real organisational problem and defend the redesign, architecture, testing, stakeholder logic, and implementation choices supporting it.
Task for students	Finalise the redesigned workflow and working solution; demonstrate the complete problem-to-solution chain; present evidence, testing and failure analysis; explain improvements; and defend the solution and implementation approach before a panel.
Expected output / submission	**Working AI-Enabled Business Solution – 24 marks** and **Presentation & Defence – 16 marks**. The final assessment must demonstrate the complete chain from problem and evidence through architecture, redesigned workflow, working solution, testing, failure analysis, improvement, stakeholder response, and implementation. The complete cumulative faculty-signed physical evidence folder must be ready in Session 18 and before Session 19. Teams arriving for the final assessment without the completed approved folder will not be assessed; the folder cannot be produced on or after Session 19 to regain eligibility.
Assessment type	☐ Individual ☒ Group Group, with individual viva / accountability during the defence
Assigned Session	1 onward through the WIP stages
Submission Session	19–20
Score Sharing	20
AI Assessment Level	☒ No AI ☐ AI Planning ☐ AI Collaboration ☒ Full AI ☐ AI Exploration

	Working Solution – Full AI; Presentation & Defence – No AI during the live defence
How AI may be used in this assessment	AI may be used extensively in developing the working solution, including workflow design, agentic functionality, MCP/tool connectivity where appropriate, coding, data handling, testing, debugging, evaluation, and iteration. AI may not be used to generate responses during the live presentation, questioning, or individual viva.
What students must do independently	Own the final problem and architecture choices; verify the solution's behaviour; interpret test outcomes and failures; decide what to improve; determine governance and implementation controls; and personally defend the team's decisions and their own contribution.
Disclosure / documentation requirement	The cumulative physical evidence folder must preserve the project trail across WIP 1, WIP 2, WIP 3, later testing, failure analysis, revisions, practitioner/stakeholder evidence, and final implementation thinking. Required documents must be faculty-signed. Students must be able to explain material AI-supported decisions, outputs, and revisions. The evidence-folder rules stated under AS2 apply.
Capability evidence expected	A functioning and defensible AI-enabled business solution supported by traceable evidence of problem diagnosis, human-AI work redesign, technical build, testing, improvement, governance, stakeholder consideration, and implementation readiness.
Evaluation criteria	**Working Solution – 24 marks:** relevance and functionality of solution; quality of human-AI workflow redesign; appropriateness of architecture and tools; evidence integration; testing quality; failure identification and improvement; governance and implementation readiness. **Presentation & Defence – 16 marks:** clarity and coherence of argument; justification of decisions; response to challenge; understanding of evidence and trade-offs; individual contribution and accountability.
Late submission / extension policy	Submissions received after the stated deadline will not be accepted or evaluated. No delayed submission is permitted.
Academic integrity / plagiarism rule	All submissions are expected to adhere to the institution's standards of academic integrity. Any plagiarism, unattributed use of sources, or misuse of AI, where AI use is restricted or not disclosed, will be treated in accordance with institutional policy.

14. ASSESSMENT GUIDE

Use this guide only for the assessment sections above. These are three independent decision guides. Faculty should not read them as fixed combinations. For each assessment, choose one EvidenceWorks Level, one primary Signature Format, and one AI Assessment Level.

A. EvidenceWorks Level

Option	Meaning	Best used when
Literacy	The assessment shows that the student can make sense of a business problem, decision context, or emerging situation.	The task is meant to assess conceptual understanding, problem framing, tool or framework use, or data interpretation.

Application	The assessment shows that the student can use relevant concepts, tools, frameworks, or methods in context.	The task requires analytical application, diagnosis, interpretation, or contextual use of methods.
Build	The assessment shows that the student can create a useful output, solution, recommendation, or managerial response.	The task asks students to produce a deliverable, design a solution, or generate a tangible output.
Judgement	The assessment shows that the student can take and defend a reasoned decision, especially where trade-offs or ambiguity exist.	The task requires decision-making, defence of position, ethical reasoning, or stakeholder judgement.
Adaptability	The assessment shows that the student can adjust thinking, output, or response as information, conditions, or constraints change.	The task requires revision, iteration, reflection, or response to changing conditions.

B. Signature Format

Option	Meaning	Best used when
SOLVE	Students diagnose a business or organisational problem and develop a reasoned response or solution.	The assessment asks students to understand a problem and recommend a response.
BOARDROOM	Students make, justify, and defend a decision under competing priorities, incomplete information, and stakeholder pressure.	The assessment requires students to take a position and defend it.
FRICTION	Students respond when assumptions fail, ambiguity increases, constraints shift, or the situation becomes harder than expected.	The assessment introduces uncertainty, complexity, breakdown, or changing conditions.
FORGE	Students build something tangible and usable, such as a framework, plan, prototype, model, dashboard, strategy output, or other value-creating deliverable.	The assessment asks students to create or produce something useful.
XLAB	Students explore emerging possibilities, future scenarios, new technologies, or experimental ideas in order to test thinking and expand perspective.	The assessment invites exploration, experimentation, or future-facing thinking.

C. AI Assessment Level

Adapted from the AI Assessment Scale (AIAS).

Option	Meaning	Best used when
No AI	The assessment is to be completed without AI assistance.	Independent knowledge, judgement, writing, analysis, or problem-solving is being assessed directly.
AI Planning	AI may be used for brainstorming, outlining, early research, or idea development, but the final work should show the student's own development and refinement.	AI can support preparation, but should not substitute for the main intellectual work.

AI Collaboration	AI may be used to support drafting, feedback, refinement, or selected parts of the task, but students must critically evaluate and modify any AI-supported output.	The assessment values the student's ability to work with AI critically and responsibly.
Full AI	AI may be used extensively throughout the task, either freely or as specifically directed in the assessment.	The assessment is designed to evaluate how effectively students direct AI while still demonstrating judgement and control.
AI Exploration	AI is used creatively to generate novel approaches, deeper insights, or innovative solutions.	The assessment invites experimentation, co-design, or exploratory use of AI in the discipline.

15. LEARNING RESOURCES AND INTELLECTUAL ENGAGEMENT

Core academic resources	1. Gurazada Pavankumar. *Generative AI for Business*. Wiley. ISBN: 9789377068530. 2. Anjali Kaushik. *Responsible AI*. Wiley. ISBN: 9789373327631.
Extended media resources	**A. LinkedIn Learning – Prescribed Skill Courses** S2: Hands-On AI: Build Automated Workflows in Google Workspace Studio S7: GitHub Essential Training: 1 The Basics S8: Build with AI: LLM-Powered Applications with Streamlit S11: Supabase Essential Training **B. Live Cases Used in the Course** Basis – S1 Proaction – S2, S8, S9, S12 Bell + ServiceNow AI Agents – S3 Gilbert + Tobin – S4 D.C. court AI-citation failure – S4 PwC 2026 AI Jobs Barometer – S6 1Password + Codex – S7 Clay – S11 BBVA + OpenAI – S13 Asana + Codex – S15 Anthropic + Accenture Embedded Evaluation – S16 Enterprise Frontier Safeguards – S17 OpenAI worker-task research – S18 Sessions 5, 10, 14 and 19–20 use the teams' live practitioner problems rather than a fixed public case.
Thought leaders and professional voices	**Ethan Mollick** – AI, work and co-intelligence: LinkedIn · One Useful Thing **Andrew Ng** – Applied AI, agents and AI engineering: LinkedIn · DeepLearning.AI · The Batch **Erik Brynjolfsson** – AI, productivity and the future of work: Stanford Digital Economy Lab **Cassie Kozyrkov** – Decision intelligence, AI strategy and human judgement: LinkedIn · Kozyr **Aneesh Raman** – Skills, careers and work redesign in the age of AI: LinkedIn · Microsoft WorkLab conversation **Recurring source:** Microsoft WorkLab Podcast

Live / current intelligence sources	Microsoft Work Trend Index – work redesign, agents and organisational change Anthropic Economic Index – occupational AI use, augmentation and automation Stanford AI Index – AI capability, adoption and impact Stanford Digital Economy Lab – AI, work, organisations and productivity PwC AI Jobs Barometer – jobs, skills and workforce evidence OpenAI work / economic research – tasks, workflows and changing ways of working Current company releases and practitioner evidence selected for individual sessions are also used as live intelligence.
How students should use these resources	Use the two prescribed books for conceptual grounding; complete the four LinkedIn Learning courses for structured tool capability; engage with the session-specific live cases before or during class to connect concepts to contemporary practice; follow selected thought leaders and current-intelligence sources periodically to track how AI-enabled work is evolving; and use practitioner evidence and verified current sources when analysing, building, testing, and defending the course project.

16. COURSE LEARNING OUTCOMES TO ASSESSMENT COMPONENTS MAPPING MATRIX

Strength with which each assessment component assesses each learning outcome: 1 = Low, 2 = Medium, 3 = High.

LOs / Assessment Components	Relevant Session Nos.	AS1	AS2	AS3	AS4	AS5	AS6	AS7
LO1: Analyze how AI changes jobs, tasks, workflows, decision rights, and managerial work, including opportunities for augmentation and automation.	1, 4, 5, 6, 9, 10, 13, 15, 18, 19, 20	2	2	3	2	–	2	2
LO2: Build and deploy AI-enabled workflows and business applications using appropriate tools for interface, automation, versioning, persistence, agentic workflows, and tool connectivity.	2, 3, 7, 8, 11, 12, 14, 19, 20	–	–	–	–	2	–	3
LO3: Design evidence-based human-AI solution architectures for real organizational problems, selecting among agentic, app-based, data-backed, hybrid, or deterministic approaches.	5, 10, 11, 13, 14, 15, 17, 19, 20	–	1	2	3	–	–	3
LO4: Evaluate, improve, govern, and defend AI-enabled solutions using structured testing, failure analysis, stakeholder validation, privacy and control, and implementation planning.	1, 3, 4, 6, 7, 9, 13, 15, 16, 17, 18, 19, 20	1	–	–	2	–	3	3
(Remarks if any)	Where 1 = low, 2 = medium and 3 = high; – = component does not assess this LO.							

17. FIIB COURSE CONDUCT POLICY

Academic Integrity: Students are expected to uphold FIIB's Academic Integrity Policy, detailed in the Student Handbook, which emphasizes honesty, originality, and responsibility in all academic work.

Diversity, Equity, Inclusion and Belonging (DEIB): Students are expected to uphold FIIB's DEIB Policy, detailed in the Student Handbook, ensuring respect, inclusivity, and belonging for all members of the community.
